G36A2 & G36E

How to install ?

[FiveM_Replace]:

Drag and drop the "G36A2" or "G36E" folder somewhere in your folder hierarchy on your server and now go to the server.cfg and add a new line called "ensure G36A2" or "ensure G36E".

Ingame you can spawn your weapon with the name "weapon_specialcarbine"

I recommend to use a command to give you the weapon or vMenu

[FiveM_Addon]:

Drag and drop the "G36A2" or "G36E" (You can do both) folder somewhere in your folder hierarchy on your server and now go to the server.cfg and add a new line called "ensure G36A2" or "ensure G36E".

Ingame you can spawn your weapon with the name "weapon_G36A2" or "weapon_G36E"

[Singleplayer]:

Place the weapon files in

update\x64\dlcpacks\patchday8ng\dlc.rpf\x64\models\cdimages\weapons.rpf

and the weapons.meta in

mods\update\update.rpf\dlc_patch\mpbusiness\common\data\ai
